Consulting:	\$100.00	Hour

Sites are hosted on a Unix (RedHat Linux) operating system and protected by a firewall (Symantec Firewall/VPN 200R appliance). Web server used is Apache, database used is MySQL, SSL used is OpenSSL, web programming is performed mostly in Perl, digital site certificates are purchased through either Verisign or Thawte, and domain names are purchased through Network Solutions. All equipment is protected by both uninterruptible power supplies (Triplite UPS') and backup generator power for the entire facility.

Discounts on services and fees can be negotiated upon discussion of the level of work the effort will take and the length of the contract. All services are rounded to the nearest ¼ hour. All invoices are due payable in full within 15 calendar days of the invoice date, unless previous arrangements are made with RBK Publishing Inc. A 2% late fee finance charge will be added to any total outstanding invoices each month for payments that are received late, until the full payment is received. Also, there will be a minimum \$25.00 fee on all returned checks. On all development contracts, final costs will be broken into thirds with the first third from the customer due upon start of contract, second third due half way through the contract, and the final third due before delivery of final product. On all hosting services, costs will be paid by the customer in advance and paid either in 3 month, 6 month, or 12 month increments.
